

I'm am an Amateur Radio Operator and very concerned about the interference this will cause on the HF segment of the Bands allocated to Amateur Radio use. I have a lot invested into Amateur radio, as do other Amateur operators around the country. I hate to see that destroyed by greedy Power companies wanting to cash in on broadband. I feel this will also have an impact on the Amateur operators ability to support communications in event of an emergency. I hope the FCC continues to work with the ARRL on this issue.

Thank you
